Executive Summary

Introduction

This Solvency and Financial Condition Report (SFCR) has been prepared in line with the requirements of the Solvency II (SII) Regulations, to assist the customers, business partners and shareholders of The Baptist Insurance Company PLC (the Company) and other stakeholders in understanding the nature of the business, how it is managed and its solvency position.

Our business

The Company is an independent, specialist financial services company that provides insurance and risk management advice for churches, as well as offering home insurance for Baptist Ministers, church volunteers and church members.

The vision of the Company is to be the first choice insurer within the Baptist family. The mission is to run a successful business with the highest standards of integrity and help to create safe environments for worship, witness and service.

Success includes being able to generate distributable profits that may be used to strengthen the Company's capital position and to reinvest in the Baptist community through payment of charitable grants.

Business performance

The Company had a strong performance in the year despite the continued challenges faced by Covid-19 and its associated variants and pandemic related restrictions. The investment performance was markedly higher than the previous year though this was partly offset by the underwriting performance, which experienced a small loss.

The investment income reported strong unrealised gains of £817k (2020: £203k). This was driven by strong performance in the Sustainable Funds. The FTSE as at end of 2021 settled at a 14.3% increase from the end of 2020 position.

The underwriting performance in the year from the post-1998 portfolio was a profit of £144k largely generated by profit commission of £390k, £84k ahead of budget following a favourable claims performance for the year, despite the large property claims experience. This was offset by prudent reserve strengthening on the run off account (pre-1998) following registration of a number of claims during the year, a negative impact of £163k from the run-off account.

As a result of the overall strong operating performance of £966k, the Company was able to distribute charitable grants back to the Baptist Community of £299k, and at a slightly higher level than the previous year's amount of £291k.

The Company continued to operate a Joint Administration Agreement (JAA) with the Administrator, as a result the governance of the Company remained stable and in line with the previous year.

Solvency and financial condition

The Company uses the Standard Formula to calculate its Solvency Capital Requirement (SCR) and Minimum Capital Requirement (MCR).

A summary of the Company's solvency position at the end of 2021 and the change over the year is shown below:

Summary solvency position	2021 £'000	2020 £'000	Change £'000
Own Funds	9,231	8,638	593
Market risk	3,107	2,370	737
Counterparty default risk	531	537	(6)
Non-life underwriting risk	64	61	3
Diversification	(401)	(389)	(12)
Basic SCR	3,301	2,579	722
Operational risk	110	109	1
Loss absorbing capacity of deferred tax	(303)	(229)	(74)
Standard Formula SCR	3,108	2,459	649
MCR	3,126	3,338	(212)
Coverage ratio (SCR)	297%	351%	(54%)
Coverage ratio (MCR)	295%	259%	37%

The Company's regulatory solvency position has remained very strong. Own funds increased by £593k in the year primarily due to an increase in financial assets partially offset by an increase in technical provisions. This is explained in more detail in section E.1.

The Company's SCR increased in the year by £648k as the exposure to equities increased by 20% as markets recovered after Covid-19 but still lies below MCR and hence MCR is the Capital requirement.

More detail on the changes in SCR during the year is given in section E.2.

Outlook for 2022

2021 saw the continuation of the Covid-19 pandemic, with the emergence of variants as well as a number of government imposed lockdowns, but with widespread vaccine deployment and gradual easing of pandemic related restrictions within the UK and worldwide, which enabled the economy's resilience and confidence. The global economy continued to recover with Britain's economy growing by 7.5%. It is expected that in 2022, despite the ongoing Covid-19 concerns the insurance industry is poised for a period of purposeful growth, although non-pandemic challenges around cyber security, regulation, climate change, sustainability, evolving consumer preferences could present themselves.

The Ukraine conflict presents significant uncertainty and risk, notably in respect of investment markets, supply chains and inflation, particularly for oil and gas supply. In addition, the conflict presents a significant risk to sustainable sources of energy should countries respond to Russia's aggression which may have a dual impact on climate change and desired global targets. These risks have been and are continually monitored and managed under well-established business continuity plans.

The Company continues to regularly monitor solvency levels and no instances of a breach of its MCR, SCR or the Board's risk appetite have occurred up to the date of this report being published. Serving our

customers, stakeholders and the health and well-being of Ecclesiastical Insurance Office employees working on behalf of the Company has been and continues to be our priority as restrictions are eased following the government directives.

A number of trends have been identified as potentially having a significant impact on the business and operating environment for insurers in 2022 and beyond. These include increased demand for more affordable, customised and transparent insurance, digital adaption whilst tightening cybersecurity, as well as workforce transformation which includes hybrid working in addition to talent attraction and retention. Climate change and sustainability continue to be a key focus, with insurers expected to have in place tangible steps and metrics to address the environmental, social and governance (ESG) concerns and opportunities.

The Company's capital position remains very strong and is well placed to withstand continuing market volatility, currency instability and industry pressures.

Directors' Statement of Responsibilities

The Baptist Insurance Company PLC

Financial year ended 31 December 2021

Statement required by Article 55 of the Solvency II Directive

We acknowledge our responsibility for preparing the Solvency and Financial Condition Report in all material respects in accordance with the Prudential Regulation Authority (**PRA**) Rules and the Solvency II Regulations.

We are satisfied that:

- a) Throughout the financial year in question, the insurer has complied in all material respects with the requirements of the PRA Rules and the Solvency II Regulations as applicable to the insurer; and
- b) It is reasonable to believe that the insurer has continued so to comply subsequently, and will continue so to comply in future.

D. Lane

Chief Executive Officer Date: 7 April 2022

A. Business and performance

A.1 Business details and group structure

A.1.1 Name and legal form of the company

The Baptist Insurance Company PLC is a public limited company incorporated and domiciled in the United Kingdom. The address of the registered office is:

Benefact House 2000 Pioneer Avenue Gloucester Business Park Gloucester GL3 4AW

A.1.2 Supervisory authority

Prudential Regulation Authority Bank of England 20 Moorgate London EC2R 6DA

A.1.3 External auditor

Ernst & Young LLP The Paragon 32 Counterslip Redcliffe Bristol BS1 6BX

A.1.4 Qualifying holdings

The Company has issued 28,284 five percent cumulative ordinary shares of £5 each. These are held by a number of Baptist related organisations and private individuals. Qualifying holdings are as follows:

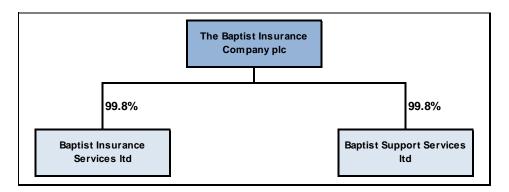

- The Central Baptist Association which holds 3,205 shares equating to 11.331% of the voting rights of the share class.
- Eastern Baptist Association which holds 3,204 shares equating to 11.328% of the voting rights of the share class.

In addition, 1,286 four percent cumulative preference shares of £5 each have been issued. Qualifying holdings are as follows:

- London Baptist Property Board Limited which holds 130 Shares equating to 10.109% of the Share class.
- Gordon Harvey Price holds 238 Shares equating to 18.507% of the Share class.

A.1.5 Group structure

Below is a graphical representation of the group structure and the Company's position within the group:

The Company as well as both its two subsidiaries are incorporated in England and Wales. The subsidiaries are dormant, having not traded since incorporation. The Company holds 998 of the 1,000 ordinary shares of each subsidiary. The remaining shares are held by the directors of the subsidiary as nominees, who are also directors of the Company.

A.1.6 Lines of business

The principal lines of business of the Company are:

- · Fire and other damage to property; and
- General liability.

The Company provides insurance and risk management advice for churches, as well as offering home insurance for Baptist Ministers, church volunteers and church members within the United Kingdom.

A.1.7 Significant events

The invasion of Ukraine in late February 2022 is a cause for concern around the world. Large oil and natural gas stocks are found in the region, leading to fears of supply shortages due to the imposition of sanctions and surging energy prices. Countries across Europe (including the UK) are seeking to lessen their reliance on Ukraine and Russia for oil and natural gas supplies. Disruption fears now encompass a wide range of other products that will affect both businesses and consumers. This would inevitably lead to an impact on climate risk and desired global targets.

Uncertainty has spread, with volatility seen in global financial markets and adverse impacts beginning to flow through for economic growth and inflation. Cyber risk remains a constantly evolving threat due to the threat of zero day attack and with the unfolding conflict in Ukraine.

Although the easing of most pandemic-related restrictions means we entered 2022 in a very different place to the start of last year, we are still living with Covid-19, and some remaining level of uncertainty from the pandemic will likely persist.

These and other risks are being continually monitored and the Company is managing the ongoing impact of the Ukraine conflict and associated risks, utilising business continuity and risk management processes where appropriate.

The Company has a robust and regular solvency monitoring process in place together with a strong risk management framework. Whilst 2021 solvency surplus is extremely strong, the Company and the wider group continues to monitor the impact of the Ukraine conflict and other key risks. Up to the date of this report being published no instances of a breach of its MCR, SCR or the Board's risk appetite have been identified.

The significant risks to which the Company is exposed and how these are managed are discussed in more detail in section C.

A.2 Performance from underwriting activities

A.2.1 Overall underwriting performance

The underwriting performance for the year was a profit of £144k on the post-1998 account due principally to the strong reinsurance profit commission, resulting from a favourable claims performance despite some large property claims experience, notably due to escape of water resulting from burst pipes and pipe leaks, and some impact from floods and storms. Reserves attributable to the pre-1998 run-off account were however prudently strengthened in respect to prior historical years by £163k, giving a net underwriting loss of £19k overall.

The impact of the Covid-19 pandemic continued to be minimal, with 3 registered claims, which all closed at nil, and a small IBNR provision held to cover potential exposure.

In the year, there were five new pre 1998 run-off claims registered. In addition to this, an existing claim closed at nil. The overall impact of this was an increase of £250k gross (£25k net). The Company run-off IBNR experienced an increase of £230k gross (£138k net) as a result of this experience and to include an increased reserve for future potential claims.

Corporate Expenses have experienced an increase from the prior year, primarily driven by higher than expected one-off costs, which included recruitment fees for new directors and other professional fees.

Gross Written Premium (GWP) increased by 2.2% compared to the prior year (2020: 1.5% increase). Indexation was a key contributor to the GWP growth. New business was favourable to budget whilst retention rates remained strong at over 95% and in line with budget.

A.2.2 Performance by material class of business

Underwriting Performance By Material Class Of Business				
Description	Property		Liability	
	2021 £'000	2020 £'000	2021 £'000	2020 £'000
Gross Written Premium	3,358	3,285	288	285
Gross Earned Premium	3,299	3,266	288	291
Gross Incurred Claims Reinsured Run-off	(1,266) (1,266)	(649) (649)	(557) (77) (480)	(116) <i>(149)</i> 33
Commission	(15)	(16)	(1)	(2)
Expenses	(225)	(175)	(20)	(16)
Gross Underwriting result	1,793	2,426	(290)	158
Reinsurance Earned Premium	(3,299)	(3,266)	(288)	(291)
Reinsurance Claims	1,266	649	394	116
Reinsurance Commission	303	523	99	2
Net Underwriting result	63	332	(86)	(16)

^{*}Other business is not considered material and consists of personal accident and pecuniary loss. The net underwriting result was £4k (2020: £8k).

Property

The property account reported an underwriting result of £63k, lower than the previous year's profit of £332k due to large claims and a large claim release. During the year, a number of large claims were registered predominantly due to escape of water, surface floods and storms. Further to this, a number of attritional claims were reported mainly due to wet perils and weather which adversely impacted the claims performance and subsequently the Reinsurance Commission. Higher expenses also adversely impacted the result. Despite this experience, the account still reported a positive underwriting result.

Liability

The liability account reported a loss of £86k. This was attributable to the run-off claims experience.

Run-off claims are historic liability claims including physical and sexual abuse (PSA) claims. Five new pre-1998 run-off claims were registered in the year, one of which was a previously closed claim in the year. These amounted to £250k gross and £25k net. In addition to this, the Company run-off IBNR experienced an increase of £230k gross and £138k net following the experience and to include an increased reserve for future potential claims. As at the end of the year, the resulting run-off claims and IBNR stood at £480k gross and £163k net.

Mitigating the run-off experience, the Reinsurance Commission is significantly higher than the previous year attributable to post-1998 liability claims experience which has been light, as well as the reduction in post-1998 IBNR owing to favourable movement in the discount factor.

The Company only underwrites business in the UK and therefore an analysis by geographical region has not been provided.

A.3 Performance from investment activities

A.3.1 Investment performance by asset class

Investment performance	2021	2020	Inc/(Dec)
	£'000	£'000	£'000
OEIC Income	138	169	(31)
Bank Interest	0	2	(2)
Total Income	138	171	(33)
Realised Gains / (Losses) On Investments	-	254	(254)
Unrealised Gains / (Losses) On Investments	817	203	614
Total investment return	955	628	327
Instalment Handling Fees	35	34	1
Investment Expenses & Charges	(5)	(5)	(0)
Net Investment return	985	657	328

Total income consisted primarily of Open Ended Investment Company (OEIC) income received during the year by the Company. For the year, this amounted to £138k, an 18% decrease on the prior year and driven by a change in the portfolio in 2020 that included a purchase of a new investment which has not as yet paid out any income. Bank interest was negligible in the year.

Investment performance in 2021 was good, despite the continuing economic impact of the Covid-19 pandemic, with the total investment return at £955k 327k higher than 2020. The positive performance was driven by the Sustainable Funds held by the Company which all delivered unrealised gains reflecting perforamnce of the global stock markets. The FTSE as at end of 2021 was 14.3% higher than the end of 2020. During the year, the Company did not purchase or dispose of any investments, other than dividends being reinvested back into the account.

Instalment handling fees, which relate to policies that are settled in instalments rather than in full, have remained at a similar level to 2020.

The Company's investment consists wholly of OEICs and the mix of underlying investments were as follows, with the change driven by the unrealised gains in the year:

Investment Mix*	2021	2020	Inc/(Dec)
	£'000	£'000	£'000
Fixed Interest	3,804	3,683	122
UK Equities	1,598	1,481	117
Overseas Equities	3,554	2,821	733
Cash	130	146	(16)
Fair Value	9,086	8,131	956

^{*} Based on the fair value at the year end position

A.3.2 Gains and losses recognised directly in equity

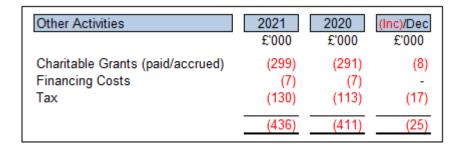

The Company has not recognised any gains or losses directly in equity in either the current or the previous reporting period.

A.3.3 Investments in securitisation

The Company does not hold any investments in securitisation.

A.4 Performance from other activities

A.4.1 Other Activities

Charitable Grants

The Company distributed £299k in charitable grants in support of the Baptist Community. This was an increase to the amount allocated in 2020 of £291k and in line with the budget of £300k.

Financing Costs

Financing costs comprise fixed interest preference shares at 4% and ordinary preference shares at 5%. There have been no changes in the year.

Tax

The Company's tax charge for the year was £130k (2020: £113k).

A.5 Any other information

There is no other material information regarding the Company and or its performance as an insurance undertaking to disclose outside of what has been disclosed in earlier sections.

B. System of governance

B.1 General information on the system of governance

B.1.1 Governing Body – Roles and segregation of responsibilities

Composition

The Company is governed by a Board of Directors (the Board) comprising a Non-Executive Chairman, eight Non-Executive directors (NEDs) and an Administrator Director.

The Role of the Administrator – outsourcing arrangements

The arrangements for the provision of management and administration services to the Company by an outsourced provider, the Administrator, are set out in the Joint Administrative Agreement. In accordance with the Company's Articles of Association, an Administrator Director, who is an employee of the Administrator, has been appointed to the Board. Authority is delegated by the Board to the Administrator for the sound management of the Company's day to day business.

Appointment of Non-executive Directors

Apart from the Administrator Director, the NEDs of the Company are appointed as either Ordinary Directors or Baptist Union Directors, as permitted in the Company's Articles of Association. The Company believes the size and composition of the Board gives it sufficient independence, balance and depth of professional experience to consider the issues of strategy, performance, resources and standards of conduct.

The Board continually reviews the appropriateness of the Directors through the use of Board evaluations, and review of Directors' training and development needs.

Key roles and responsibilities

The Board retains responsibility for ultimate supervision and control of the Company, and is responsible for ensuring compliance of the outsourcing services and reinsurance agreement and all of its regulatory requirements and obligations.

The Board is responsible to the Company's shareholders for the long-term success of the Company, its strategy, values and its governance. Great importance is placed on a well-informed and decisive Board, and Board meetings are scheduled and held regularly throughout the year.

A Board Charter has been developed which establishes a framework for the conduct of the Board and its committees with clear guidelines as to its responsibilities, the expected standard of behaviour, and best practice in fulfilling its obligations to the Company. The Board is responsible for:

- culture and values;
- strategy and direction;
- · leadership and organisation;
- governance;
- risk management and controls;
- financial expectations and performance; and
- communication.

Segregation of Responsibilities

The approach to segregation and delegation of responsibilities is set out in the Company's governance framework, which demonstrates the high standards of compliance and corporate governance adopted and followed. The framework establishes appropriate procedures, systems and controls to allow Directors to discharge their duties and obligations effectively. It sets clear expectations for all operations in terms of their strategy, governance, performance, risk parameters and controls to protect the interest of the Company's stakeholders.

Segregation of responsibilities is an important internal control, which helps ensure that no one individual has unfettered powers of decision. By selectively delegating authority and certain functions to various individuals and committees, the Board does not absolve itself of its own responsibilities.

Chair

The Chair is responsible for:

- the active leadership of the Board, ensuring its effectiveness in all aspects of its role;
- maintaining an appropriate balance on the Board regarding skills, knowledge, experience and diversity;
- ensuring that all relevant issues are on the Board agenda, that directors receive all appropriate
 documentation in a timely manner, are enabled and encouraged to play their full part in relevant
 discussions and debate, and that the management team are both supported and challenged;
- through Board committees, ensuring that the management team is adequately resourced and that there are succession plans in place for all directors;
- ensuring that the CEO/General Manager is working to clear objectives and that their performance and the Board's performance is effectively monitored; and
- appraising the performance of individual directors in conjunction with the Senior Independent Director (SID).

The Chair is expected to demonstrate the highest standards of integrity and probity, and set clear expectations concerning the company's culture, values and behaviours, and the style and tone of board discussions.

Senior Independent Director

In addition to their other duties as a NED, the SID is responsible for:

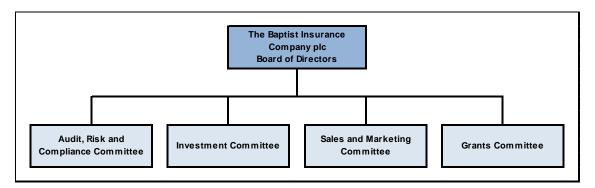

- acting as a sounding board for the Chair;
- leading the evaluation of the Chair;
- acting as an intermediary for the other Directors where necessary;
- meeting with the other Directors without the Chair present if required; and
- being available to the shareholders if they have any concerns about the running of the Company that have not been resolved.

Non-Executive Directors

NEDs have a responsibility to uphold high standards of integrity and probity. They should constructively challenge and help develop proposals on strategy and have the same responsibilities and liabilities under legislation and case law as Executive Directors.

B.1.2 Delegation to committees

The Board has established four committees which support the discharge of its duties. Each committee has agreed terms of reference which sets out requirements for membership, meeting administration, committee responsibilities and reporting.

The Board has delegated certain responsibilities to the board committees. Each committee has individual responsibilities, as detailed in their Terms of Reference, which provide delegations of authority and effective reporting structures to the Board. All committees are required to formally report back to the Board on its proceedings after each meeting on all matters within its duties and responsibilities.

A high level overview of each committee's delegated responsibilities are summarised below:

Audit, Risk and Compliance Committee (AR&CC)

The role of the Committee is to assist the Board in fulfilling its oversight responsibilities by reviewing and monitoring:

- the integrity of the financial, narrative and regulatory statements and other financial information;
- the Group's system of internal controls and risk management (including whistleblowing arrangements and climate change considerations);
- · the internal and external audit process and auditors; and

the processes for compliance with laws, regulations and ethical codes of practice. The committee members have been selected with the aim of providing the relevant financial, insurance, actuarial and commercial expertise necessary to fulfil the committee's duties.

Investment Committee (IC)

The overall management of the Company's investments is delegated to the IC. On recommendation from the committee, the Board sets the overall investment strategy with regard to risk appetite, geopolitical factors, ethical investments, mix of investments, solvency and cash flow requirements and then instructs the fund managers accordingly.

Sales and Marketing Committee

The Role of the Sales and Marketing Committee is to assist the Board in fulfilling independent oversight responsibilities by reviewing and monitoring the development of the Sales and Marketing strategy, activities and operations.

Grants Committee

Its role is to:

- solicit and assess grant applications against set criteria;
- recommend grant distributions to the Board in conjunction with the grants budget proposed by the AR&CC and subsequently agreed by the Board; and
- monitor the effectiveness of grants made.

In addition to meetings of the committee, meetings are arranged by the committee members to meet with potential or current grant recipients.

B.1.3 Roles and responsibilities of key functions

The following key functions are outsourced to the Administrator, as part of the JAA;

CEO/General Manager

The CEO/General Manager, who is the Administrator Director and fulfils the Senior Managers and Certification Regime (SM&CR) function of Chief Executive, is an employee of the Administrator and their responsibilities include:

- the delivery of, and reporting to the Board on, the implementation and execution of the Company's strategy;
- developing and managing the relationship with key stakeholders including regulators, customers and shareholders;
- establishing a framework and ensuring the maintenance of a sound system of internal control and risk management and regularly reporting to the Board on its effectiveness;
- establishing a clear set of key performance indicators and key risk indicators within which to monitor progress and where necessary take remedial action; and
- maintain effective open communication with senior managers and NEDs.

Chief Financial Officer (CFO)

The Chief Financial Officer is an employee of the Administrator and fulfils the SM&CR function of Chief Financial Officer and their responsibilities include;

- management of the financial resources of the Company and reporting to the Board in relation to its financial affairs;
- formulating and evaluating the short and long-term financial objectives and strategy of the Company;
- providing oversight of supply chain management;
- minimising and managing financial risk exposure through the implementation of suitable internal controls; and
- ensuring compliance with applicable regulatory, financial and tax obligations.

Internal Audit Function

The Administrator's internal audit function (AIA) derives its authority in respect of the requirements of the Company from the AR&CC. AIA provides objective assurance to the AR&CC and the Board that the governance processes, management of risk and systems of internal control are adequate and effective to

mitigate the most significant general insurance related risks to the Company. The AIA provides regular reports to the AR&CC.

Risk and Compliance Function

The Administrator's compliance function provides assurance to the AR&CC and Board that the Company remains compliant with its obligations under the regulatory system and for countering the risk that the Company might be used to further financial crime. It ensures that appropriate mechanisms exist to identify, assess and act upon new and emerging regulatory obligations and compliance risks that may impact the Company.

The Administrator's risk function derives its authority from the AR&CC and provides oversight of the prudent management of risk including financial, operational and conduct risk. The Administrator's Chief Risk and Compliance Officer (CRO) is accountable to the AR&CC.

Actuarial Function

The Administrator's actuarial function is accountable for all aspects of capital modelling, pricing and reserving for the Company and the independent actuarial function is responsible for providing opinions on the effectiveness of technical provision calculations, underwriting and pricing and reinsurance purchase.

The key functions outsourced to the Administrator ensure the consistent implementation of systems and procedures across the Company. All individuals are required to report regularly to the Board or the relevant committee of the Board.

B.1.4 Material changes in the system of governance

During the year, and as a result of the retirement of the Deputy Chair, the Board moved from having a Deputy Chair to a Senior Independent Director.

In addition, the Board agreed that the CEO should no longer be a member of the AR&CC given associated market practice.

B.1.5 Assessment of the adequacy of the system of governance

The Board is ultimately responsible for the system of governance and believes that the affairs of the Company should be conducted in accordance with best business practice. Accordingly, the Board maintains a governance framework which it formally reviews and approves. The governance framework has been developed to ensure that the Company operates to high ethical values. The framework adopted by the Company ensures that the Board maintains oversight of all risk and governance operations, and upholds its responsibility for delivering long-term value for the Company's shareholders. The framework enables the Board to maintain its focus on setting an appropriate culture, aimed at delivering the right outcomes for its customers, whilst discharging its duties effectively.

The Governance Framework is formally reviewed and approved by the Board following recommendation from the AR&CC. It was last approved in December 2021.

The JAA ensures that all operational and management services are provided by the Administrator, and the Reinsurance Agreement ensures that all risks underwritten by the Company are 100% reinsured by the Administrator, with the exception of eligible terrorism above a minimum retention and flood risks, which are reinsured by Pool Re and Flood Re respectively. The Board continually reviews the adequacy and effectiveness of the outsourced arrangement with the Administrator including through its Board

Evaluation and by reviewing associated agreeements. The Chairman of the Board meets annually with the CEO of the Administrator.

The Board, through the AR&CC, regularly reviews the adequacy of the system of governance on a general basis and has concluded that it is appropriate and effective based on the nature, scale and complexity of the risks inherent in the business. The effectiveness of the system of governance is considered through the receipt of the following:

- the ORSA;
- management accounts with full underwriting, claims and investment analyses;
- internal audit report findings;
- · compliance report findings;
- compliance with the schedule of services outlined in the JAA;
- compliance with the governance framework and associated governance documentation;
- monthly business reports; and
- reports from the Administrator's nominated key function holders.

B.1.6 Remuneration policy

The Company has no staff. NED's remuneration is set by the Board typically every two years, taking into account the responsibilities of the directors and receiving advice on levels of remuneration in comparable organisations.

B.1.7 Entitlement to share options, shares or variable components of remuneration

The Company has no staff and the Directors have no entitlement to share options, shares or variable components of remuneration in respect of the Company.

B.1.8 Supplementary pension or early retirement schemes for the members of the Board and other key function holders

The Company has no staff and the Directors and other key function holders have no entitlement to supplementary pension or early retirement schemes in respect of the Company.

B.1.9 Material transactions during the reporting period with shareholders, persons who exercise a significant influence, and with members of the board

No contract of significance subsisted during or at the end of the financial year in which a director was or is materially interested.

B.2 Fit and proper requirements

B.2.1 Skills, knowledge and expertise requirements

The company is committed to ensuring that all fit and proper regulatory requirements are met for its senior leaders within the Senior Managers and Certification Regime (SM&CR).

The PRA and FCA consider that the most important factors in assessing an individual's fitness and propriety are:

Honesty, integrity and reputation

- Competence and capability
- Financial soundness

In order to initially determine fitness and propriety all prospective senior role holders take part in a multi stage interview process, supported by psychometric testing, involving relevant stakeholders. The candidates' knowledge, experience and qualifications in such areas as market knowledge, business strategy, financial analysis, working within regulated frameworks and governance/ risk management are fully explored. Due diligence is fulfilled through pre-employment checks and referencing that are carried out upon an offer being accepted.

B.2.2 Ensuring ongoing fitness and propriety

Ongoing adherence to these standards is assessed through performance review cycles and is subject to further confirmation through an annual fit and proper process, carried out for all individuals caught within the SM&CR, covering:

- competence and performance in carrying out the documented responsibilities of the role
- CPD and training to maintain knowledge and skills
- completion of regular mandatory company training
- disclosure and barring criminal records and credit checks
- self-assessment against fitness and proprietary questions

Where the company becomes aware of concerns regarding the fitness and propriety of a person in a relevant role it will investigate and take appropriate action without delay in line with the Fitness and Propriety policy. The regulator will be notified of any action where necessary.

B.3 Risk management system including the ORSA

B.3.1 Overview of the risk management system

The Company has outsourced the day to day operation of its business to the Administrator under the JAA. Day to day risk management in conjunction with the activities specified under the JAA is carried out within the Administrator's risk management framework but reflecting the Company's Board approved risk appetite, risk register and analysis of risk. This comprises the strategies, objectives, policies, guidelines and methodologies needed to ensure that the business is operated on the Company's behalf in line with its expectations, regulatory requirements and commensurate with its own appetite for risk taking. The JAA is the key document which sets out the Board's requirements and expectations of the Administrator.

B.3.2 Effectiveness of identifying and managing risks

The AR&CC has delegated responsibility from the Board for reviewing the effectiveness of all aspects of the risk management framework including identification and management of risks and receives regular reports from the relevant business areas within the Administrator to assist in these activities.

The Board receives regular reports from the AR&CC which enable it to ensure that all aspects of the risk management system are robust. Furthermore, as part of their review of the individual components of the ORSA process and approval of the ORSA document, the Board satisfies itself with the effectiveness of the identification and management of the risks faced by the Company in the delivery of its objectives and business strategy.

The Board considers the effectiveness of the overall governance arrangements and in particular the outsourcing agreement together with recommendations for improvement should this be necessary.

B.3.3 Implementation of the risk management function

The JAA formalises the outsourcing arrangement in place with the Administrator who adopts a Three Lines of Defence model to ensure the successful operation of its risk management process. This operates as follows for the Company:

- 1st Line (Business management) is responsible for strategy execution, performance, identification and management of risks and the application of appropriate controls;
- 2nd Line (Reporting, oversight and guidance) led by the CRO, is responsible for assisting the
 Company's Board to formulate risk appetite, establish minimum standards, develop appropriate
 reporting, oversight and challenge of risk profiles and risk management activities. This is subject
 to oversight and challenge by the AR&CC;
- 3rd Line (Assurance) provides independent and objective assurance of the effectiveness of the systems of internal control. This activity principally comprises internal audit which is subject to oversight and challenge by AR&CC.

The first line of defence consists of the day to day management and operation of the business and requires that those responsible for this are also responsible for ensuring that a risk and control environment is established as part of the day to day operations, and for delivering strategy and optimising business performance within an agreed risk and governance framework.

Under current arrangements, the majority of first line activity is outsourced to the Administrator. However; the Board is ultimately responsible for the governance and sound and prudent management of the Company. The Board, in fulfilling its functions and objectives, seeks assurance from the first line, Business Management, of the Administrator to ensure that there is a robust risk and governance framework which includes policies, systems and controls.

The second line of defence comprises the risk and compliance functions of the Administrator who provide reporting to the Board's AR&CC as part of the services provided under the JAA. This provides a framework of governance and independent risk oversight, including monitoring and providing challenge to the first line of defence. The second line also provides the operational areas with the necessary training, tools and techniques to manage risk and establish internal controls in an effective way.

The third line of defence is independent and objective assurance of the effectiveness of the Company's systems of internal control. This activity principally comprises the Administrator's internal audit function as part of the services provided under the JAA, and provides regular reporting to the AR&CC.

There are a number of key roles and responsibilities concerning the effective implementation and operation of the overall risk management framework:

The Company Board

The Board is responsible for:

- determining strategy and direction in line with its appetite for risk;
- gaining satisfaction over the integrity of financial information and that financial controls and systems of risk management are robust and defensible; and
- ensuring that the ORSA process has been followed and managed effectively.

Audit Risk and Compliance Committee

The AR&CC has been delegated responsibility for risk management and internal control from the board. Responsibilities of the AR&CC include:

- reviewing the effectiveness of the Company's financial reporting and internal control policies and procedures for the identification, assessment, reporting and management of risks;
- assessing the scope and effectiveness of the systems established by management to identify, assess, manage and monitor financial and non-financial risks; and
- · recommending the risk appetite to the Board.

Investment Committee

The Board has delegated responsibility for oversight of the Company's investments and associated markets risks to the Investment Committee. They are responsible for ensuring that the Company operates an investment strategy that is appropriate to the Company's ethics, performance objectives, risk appetite and capital management strategy, as defined in its statement of investment principles and as articulated in the Company's investment policy.

CEO and the Administrator's Operational Areas (1st Line of Defence)

These areas are responsible for ensuring that there is an ongoing process for the identification, assessment, management and reporting of the significant risks during the course of business operations.

The Administrator's Risk Function (2nd line of defence)

The Risk Function bears responsibility for facilitation of:

- the management and ongoing effectiveness of the risk management framework by providing tools, training and support so stakeholders can effectively discharge their responsibilities; and
- the Board's risk identification and assessment process and providing guidance to the Board when determining the risk appetite.

The Administrator's Internal Audit Function (3rd line of defence)

The Administrator's Internal Audit function provides an independent opinion over the adequacy and effectiveness of the risk management framework.

A key component of the governance of the Company is a policy framework covering all important elements of managing the Company's business. This contains a set of policies that provide high level guidance around the following areas, with specific policies covering each area in more detail:

- board policies;
- insurance policies;
- · capital policies; and
- risk and governance policies.

The policy framework is communicated to the relevant persons within the Administrator who administer the Company's business under the JAA and provides clarity around the risk management expectations of the Board in all aspects of the operations. The policy framework supports adherence to the Company's risk appetite and risk management principles.

B.3.4 Own risk and solvency assessment process

The ORSA is a vital and integral process that assesses the overall solvency needs and the capital, and other resources, required to deliver the agreed business plans. The objective of the ORSA is to demonstrate that a firm has, or can access, the resources necessary to carry out its business plan in the context of risk policy, risk appetite, a forward looking assessment of risks, the potential for stress and the quality of its risk management environment.

The ORSA assesses all risks in the business, outlines the current solvency position, the business plan for the next three years, summarises the stress testing and scenario analysis undertaken in conjunction with the business plan, and projects the solvency position over the planning period. This ensures that the business strategy and plans are formulated and signed off by the Board with full recognition of the Company's risk profile and future capital requirements.

The Company has delegated the production of the ORSA to the Administrator under the terms of the JAA. The Board is the ultimate owner and fully involved in the key processes, providing challenge and steer. The report is reviewed in detail by the AR&CC before being recommended for approval by the Board, The ORSA process integrates the Company's risk management, business planning and capital management activities. Key steps in the process are:

- establishment and operation of the risk management framework, including policies and the risk appetite;
- assessment of the current risk profile of the business and tolerances and limits to ensure adherence to the risk appetite. This provides a context for business planning;
- a forward looking risk assessment, including identification of emerging risks;
- a business plan for the chosen time horizon that has been derived with reference to the risk appetite, the risk profile of the business and optimal use of capital;
- identification of the impact of the proposed business plan on the risk profile of the business over the plan horizon. This should cover all risks in the business, both short-term and long-term, and include any risks not covered in the Standard Formula;
- a stress testing and scenario analysis framework, including reverse stress testing, with assessment in context of the proposed business plan;
- assessment of the capital required to carry out the business plan, particularly the Own Funds
 necessary to ensure the continued ability to meet regulatory and assessed capital requirements
 at all times over the plan period;
- assessment of the risk profile in comparison to the assumptions underlying the calculation of the regulatory capital requirements;
- consideration of how any shortfall in capital might be addressed and the likelihood of success;
- assessment of the adequacy and quality of the risk management environment.

B.3.5 Frequency of review

The ORSA is an ongoing process that operates on an annual cycle with a report being signed off by the Board each year. Regular updating of the key elements is undertaken throughout the year and changes to the risk profile and business plans are quantified.

The ORSA process is also performed upon the occurrence of certain trigger events such as significant external events or material changes to the business strategy.

B.3.6 Determination of own solvency needs

The Board and AR&CC assess the various risk elements of the business covering credit, operational, underwriting, reserving, and investment risk and makes a calculation of the capital requirements arising from those risk elements. Guidance and advice is taken from the CFO, CRO, actuarial and finance teams of the Administrator as well as the AR&CC where analysis is undertaken utilising those technical and professional feeds. Insurance risk is covered by the reserving and underwriting assessments carried out on a regular basis by the operational teams of the Administrator.

All aspects of capital management are contained within the Board approved Capital Management Policy. Responsibility for setting objectives and policies relating to own funds rests with the Board. Responsibility for implementing objectives and policies rests with the AR&CC through delegation from the Board. Day to day management at operational level is outsourced to the Administrator through the JAA.

As such, the day to day management, compilation of reporting, interaction with risk management systems and stress testing is all carried out by the Administrator under the JAA. Detailed reporting of all aspects of solvency and capital management are reported to the AR&CC for detailed review prior to recommendation to the Board for approval.

The AR&CC and Board receive quarterly reporting which includes a Solvency Statement. The Solvency Statement incorporates scenario testing covering risks that the company is exposed to, for example significant falls in the UK equity share index (FTSE). Should a significant market trigger event occur then additional, more frequent reporting would be implemented as required.

It is the overall policy of the Board to ensure that there is always adequate capital to meet current and future projected requirements from the planning process and to satisfy regulatory requirements. An additional buffer is also maintained above the minimum regulatory requirement in accordance with the Board's risk appetite to cover any possible unforeseen events.

B.4 Internal control system

B.4.1 Internal control system

The Internal control system is implemented by the Board and Chief Executive Officer, to ensure that the Company is managed efficiently and effectively.

The Board has established appropriate Board level policies and a risk appetite to ensure that business objectives are achieved. As the day to day operation of the business has been outsourced to the Administrator, the business is managed within the Administrator's own internal control system in accordance with the Board's requirements which are detailed within the JAA. The Board monitors the performance of the Administrator and the internal control system on an ongoing basis.

The Control Framework of the business managed by the Administrator comprises the following elements:

- control environment: a business culture that recognises the importance of systems of control and management to ensure the resources and environment is adequate to operate the control framework to required standards;
- objective setting: a process to set objectives that support the mission of the company and are consistent with the risk appetite;

- risk assessment: identification and analysis of risks is undertaken and appropriate risk responses are implemented;
- control standards: a policy framework that establishes the Board's minimum standards for the mitigation of risk within the stated appetite;
- control activities: business processes that include control activities designed to mitigate risks to the level required to meet the control objectives;
- monitoring activities: regular monitoring of controls according to their materiality;
- training and communication: effective communication of required control standards and adequate training to ensure those operating or monitoring controls can do so effectively;
- recording: clear documentation of controls to enable the ongoing operation and oversight; and
- reporting: reporting of material control effectiveness to allow relevant management or the Board to determine whether objectives are being met or whether action is required to strengthen the control environment.

B.4.2 Group Regulatory Risk function

The Company outsources the provision of compliance services to the Administrator's Group Compliance function under the terms of the JAA, whilst recognising that responsibility for managing compliance risks remains with the Company. This function sits in the second line of the three lines of defence governance system and is responsible for:

- identifying, assessing, monitoring and reporting on the Company's compliance risk exposures;
- assessing possible impact of regulatory change and monitoring the appropriateness of compliance procedures; and
- assisting, challenging and advising the Company in fulfilling its responsibilities to manage compliance risks.

In order to ensure adequate risk control for the Company within their outsourcing arrangement, Group Compliance applies the principles and requirements of the Administrator's compliance charter. This sets out the roles and responsibilities of Group Compliance and those policies where it has delegated responsibilities.

The charter also sets out the Group Compliance function's objectives and their key performance measures. Group Compliance gains its authority from the AR&CC and the Group Head of Compliance is accountable to the Chair of that committee.

B.5 Internal audit function

B.5.1 Implementation of the internal audit function

The AIA is authorised by the Administrator's Group Audit Committee (GAC) to evaluate and report on the adequacy and effectiveness of all controls, including financial, operating, compliance, and risk management.

Adequate and effective risk management, internal control, and governance processes reduce but cannot eliminate the possibility of poor judgement in decision making, human error, control processes being deliberately circumvented by employees and others, management overriding controls and the occurrence of unforeseeable circumstances. Adequate and effective risk management, internal control, and governance processes within the scope of the JAA will therefore provide reasonable, but not absolute,

assurance that the Company will not be hindered in achieving its business objectives, or in the orderly and legitimate conduct of its business.

AlA maintain a professional audit team with sufficient knowledge, skills, experience and professional qualifications. Where specialist, technical support is necessary to supplement AlA resource, this is available through a co-sourcing contract with an external specialist provider, ensuring that AlA has immediate access to specialist skills where required. AlA confirms to the AR&CC that the International Standards for the Professional Practice of Internal Auditing of the Chartered Institute of Internal Auditors are complied with.

AIA operate within the Administrator's three lines model which has been adopted by the Company. In order to operate an effective framework, AIA maintain regular and ongoing dialogue with the first and second line to maintain a current and timely perspective of business direction and issues.

Demarcation between the third line and the first two lines must be preserved to enable AIA to provide an independent overview on the effectiveness of all risk management and assurance processes in the organisation.

B.5.2 Independence of the internal audit function

To provide for the independence of AIA, the Administrator's Group Chief Internal Auditor is accountable to the Administrator's GAC Chairman and reports on the operation of general insurance controls to the AR&CC.

Financial independence, essential to the effectiveness of internal auditing, is provided by the Administrator approving a budget to enable AIA to meet the requirements of its charter.

AIA is functionally independent of the activities audited and the day to day internal control processes of the Company and shall be able to conduct an assignment on its own initiative, with free and unfettered access to people and information, in respect of any relevant department, establishment or function of the Company covered by the JAA.

The Administrator's Group Chief Internal Auditor and staff of AIA are not authorised to perform any operational duties for the Company or the Administrator or direct the activities of any employee not employed by AIA.

B.6 Actuarial function

B.6.1 Implementation of actuarial function

The Company outsources the provision of actuarial services to the Administrator's Actuarial Function under the terms of the JAA. Baptist's Chief Actuary duties are carried out by the Administrator's Actuarial Function Director, who is an experienced qualified actuary, holding an Institute of Actuaries Chief Actuary certificate, accountable for the delivery of the Actuarial Function's objectives. The Actuarial Function Director uses other actuarial and appropriately experienced resources to discharge his responsibilities, ensuring an appropriate level of independence between those carrying out activities and those reviewing work.

The Actuarial Function's key areas of responsibility are:

- to provide oversight and co-ordinate the calculation of the technical provisions, ensuring appropriateness of data, assumptions, methodologies and underlying models used;
- to give an opinion on the technical provisions to the Board, including assessing the sufficiency and quality of the data used, informing the Board of the reliability and adequacy of the calculation and comparing best estimates to experience;
- to give an opinion on the adequacy of pricing and underwriting to the Board;
- to give an opinion on the adequacy of reinsurance arrangements to the Board as an efficient means to manage risk; and
- to contribute to the effective implementation of the risk management system.

B.7 Outsourcing

B.7.1 Outsourcing policy

The Company has a procurement, purchasing and outsourcing policy that has been agreed by the Board and forms part of the policy framework. The policy covers all procurement activities and material outsourcing arrangements.

The Company's policy is to operate an effective framework for awarding contracts to achieve a quality provision giving consideration to the expected impact on customers. Elements of the policy implementation are outsourced to the Administrator under the terms of the JAA with Ecclesiastical Insurance Office plc. The Board remain ultimately responsible for the policy ownership and implementation.

Outsourced contracts are subject to stringent controls. The Board is responsible for making all strategic decisions regarding outsourcing in the context of various key objectives and the various parameters contained within the Company's policy on outsourcing, including:

- ensure compliance with all regulatory obligations and good market practice in the selection, management and termination of suppliers;
- optimise the choice, loyalty and performance of suppliers and business partners to deliver cost effective goods and services and service enhancing solutions across the business;
- ensure that suppliers uphold the corporate values and high standards of compliance with the Company's corporate policies and regulatory obligations;
- provide for the mitigation of operational and financial risks related to outsourcing and procurement activities; and
- ensure effective identification, authorisation and management of material outsourced contracts as defined and in accordance with regulatory requirements.

A defined framework and detailed processes are in place for the appointment of new contracting parties that involves:

- the preparation of a detailed specification and risk assessment before inviting tenders;
- a critical assessment of the capacity and ability of shortlisted suppliers that is appropriate and proportionate to the services and risks;
- completion of a business continuity and information security practices questionnaire by all potential providers; and
- an assessment of these against risk appetite.

Comprehensive written contracts are entered into with accountability for managing the delivery against the contract being clearly assigned to an individual manager within the Administrator. Exit and contingency plans are documented and reviewed on a frequent basis to ensure they remain appropriate.

B.7.2 Outsourcing of critical or important functions or activities

There are six contracting parties appointed to deliver critical outsourced services:

- one for the management and administration of insurance activities;
- three for custodian and investment administration services; and
- two for specialist service provisions for specific cover provided in some general insurance products.

All outsourced providers operate from within the United Kingdom. In turn, the Administrator contracts with third parties to deliver services which benefit the Company and all outsourced arrangements entered into by the Administrator are in line with its company policy.

Included within the insurance management and investment outsourcing contracts are provisions for the regular review of the performance of these contracts and these reviews are regularly reported to the Board. With these reports, broader oversight and governance arrangements in place the Board are satisfied they are presented with all the information they need to give assurance that the providers are working effectively and within guidelines.

B.8 Any other information

There is no other material information to report regarding the system of governance of the Company.

C. Risk profile

C.1 Underwriting risk

The most material elements of the Company's underwriting risk are:

- Reserving Risk the risk of adverse change in the value of insurance liabilities relating to
 outstanding claims from prior accident years, arising from differences in the timing and amount of
 claims settlements and related expenses from those assumed in the best estimate reserves; and
- Premium Risk the risk that premiums relating to future accident years will be insufficient to
 cover all liabilities arising from that business including net of reinsurance non-catastrophe claims
 and expenses as a result of fluctuations in frequency and severity of claims, timing of claim
 settlements or adverse levels of expenses.

C.1.1 Underwriting risk exposure

The Company is exposed to risk at a gross level through the direct writing of mainly property exposures with associated liability exposures for predominantly church, commercial and household business.

Reserves are held in respect of long-tail liability claims and as with claims of this nature, there is a high level of uncertainty associated with these reserves. The AR&CC receives regular reports on the financial performance of the business including details of adverse developments.

C.1.2 Underwriting risk concentration

A key concentration for the business is the number of churches written and the impact on the Company should they be lost. This is an accepted risk as a niche insurer specifically set up for the insurance of these churches.

There are no significant geographical concentrations.

C.1.3 Underwriting risk mitigation

The key mitigation to underwriting risk is the use of reinsurance. Since 1998 the business has been 100% reinsured with the Administrator except for a small element relating to terrorism and flood, which is reinsured with Pool Re and Flood Re respectively. The Company receives a profit commission based on the results of the business reinsured to the Administrator. The AR&CC is responsible for monitoring the performance and making recommendations to the Board based on the profit commission figures.

The AR&CC and Sales and Marketing committee receive audit reports prepared by the Administrator in relation to underwriting matters and require regular updates on the progress of actions to rectify any issues arising. These are covered within a schedule of the JAA.

The adequacy of the IBNR provisions held is reviewed by the Administrator's Actuarial Reserving team quarterly following which a report is provided to the Board. This provides information relating to the review of reserve adequacy. There is also an Actuarial Function Opinion report produced annually for the Board which provides an opinion on the reserves.

C.1.4 Underwriting risk sensitivity

Relevant stress tests were carried out to simulate the impact of an ongoing rate reduction on existing business with immaterial loss of policy volumes and a potential deterioration in the historic insurance liabilities.

The first stress test considered a rate reduction over the 3 year planning period whilst claims and expensed remain at their planned level. The results indicate an adverse impact on the profit with a small reduction in the solvency coverage over the period.

The second stress test assessed the impact of a sudden adverse development on the Company's historic claims above and beyond existing claims reserves and assumed that no reinsurance recoveries could be made on the claims. This scenario had a significant adverse impact on the profits and results in a fall in the capital coverage although it remained comfortably above the Company's risk appetite

The Company is well placed to withstand such adverse events in isolation, and these stress tests do not raise material concerns over solvency or the ability to meet the Company's internal risk appetite.

C.2 Market risk

Market risk is the risk that the Company is adversely affected by movements in the value of its financial assets arising from a change in interest rates, equity and property prices, credit spreads or foreign exchange rates.

C.2.1 Market risk exposure

The overall management of the Company's investments is delegated to the IC. The IC sets the overall investment strategy with regard to risk, return, liquidity, ethical requirements and climate change requirements and then considers whether to invest in specific funds or cash securities.

The Company has a Statement of Investment Principles (SIP), which is regularly reviewed by the Investment Committee and subsequently approved by the Board, which sets out the principles of governing decisions around the Company's investments. The Governance document outlines principles related to risk including the consideration of the Company's MCR, volatility of asset classes, credit ratings, duration, asset allocation, liquidity and the nature of the investments. The Principles are designed to limit the concentration of risk and mitigate overall investment risk.

The Company has established a Main Fund to provide an agreed level of solvency cover, with assets in excess of this cover able to be invested in a Secondary Fund.

Market risk is the most significant risk for the Company and this is largely due to the underlying exposure to equity investment assets. The company has a relatively prudent appetite to risk and keeps the asset allocation in the Main Fund within that specified in the SIP, which is weighted towards Fixed Interest securities where volatility is considered to be much lower.

C.2.2 Compliance with prudent person principle

The Investment committee is made up of six suitably qualified Directors and is accountable to the Board. The Committee monitors the performance and risk of the investments on a quarterly basis and meets formally at least four times a year to conduct a rolling review of all Investment and Treasury funds. The IC formally reports to the Board and provides recommendations where appropriate.

The IC has an agreed formal Terms of Reference, which was last reviewed in December 2021 and subsequently approved by the Board. It also reviews the SIP at least annually, this last being performed in January 2021, with subsequent Board approval.

The IC has been given delegated powers to monitor and provide challenge to the Fund managers on the performance of the investments on an annual basis. The company invests directly in OEIC funds that are structured to invest in a wide range of securities.

The OEIC's are chosen for the collective characteristics of the assets in the fund and their geographical diversification. The IC regularly reviews the makeup and concentration of companies in the funds under investment and receives regular investment valuations, with a detailed report sent annually.

C.2.3 Market risk concentration

The Company invests in OEIC's for the specific reason of diversification of credit risk allowing access to a wider range of underlying investments than would be practical with direct investment. The Royal London Short Duration Credit Fund for example has investments in 312 securities as at 31 December 2021, with the largest holding accounting for 1.2% of the total OEIC value.

The Fund Manager regularly reviews and reports annually on the creditworthiness of investments in the Credit funds and company performance in the equity-based funds. The Company also monitors the credit ratings /securitisation profile of assets in bond portfolios.

The IC adheres to the asset allocation benchmarks as agreed in the SIP for the Main Fund.

C.2.4 Market risk mitigation

Investments are held by the Investment Managers' custodian banks, this giving the Company security over the assets. Where investments are made in cash deposits the bank's credit ratings are viewed by the committee and diversification is considered at all times. In addition the IC has formal agreements and set procedures for withdrawing funds or switching investments.

The IC regularly considers changes in the macro and political environment and implements risk reduction programs when appropriate. The IC also considers diversification in terms of geographical spread, sector and number of investments.

The SIP provides a policy benchmark for each asset class designed to limit market risk. Historically the most volatile asset class has been equity and the SIP limits investment in this asset class to 40% (with a 10% tolerance) of portfolio value in the Main Fund as the Long Term Asset Allocation. Greater investment discretion is allowed in the Secondary Fund.

The IC monitors movements in each of the asset classes and looks for sustainable trends in financial markets and the environment as part the risk mitigation strategy.

No mitigation against equity, currency or interest rate risk is undertaken by way of hedging or derivatives.

C.2.5 Market risk sensitivity

Stress tests have been carried out to assess the ability of the Company to withstand shock events.

The first stress test assumed a 30% fall in the Company's equity-based investments, with no change in projections for interest-bearing securities, to simulate a stock market crash. This is roughly equivalent to the magnitude of the equity falls during March 2020 at the height of the market crash at the onset of the

Covid-19 pandemic. The stress test generated a pre-tax loss in the year of the crash with a recovery in the following years.

The second stress test combined the impact of a 10% decrease in the stock market with an increase in post-1998 net claims costs on an annual basis over the plan period. This combination of events demonstrated the impact of an event that generates a surge in claims at the same time as a prolonged drop in investments. This resulted in pre-tax losses over the plan period.

It was established that both scenarios would result in the coverage of the capital requirement reducing with the second scenario generating a greater fall over the plan period. However, in each scenario the margin of coverage of the regulatory capital requirement remains comfortably in excess of the Company's risk appetite.

C.3 Credit risk

C.3.1 Credit risk exposure

The risk that intermediaries, specifically reinsurers and premium debtors, default on their obligations to the Company.

The largest exposure for the Company arises from the reinsurance agreement with the Administrator. This results in a potentially large amount of outstanding claim recoveries. The Company is also exposed to premium debtor default risk through the insurance business underwritten and cash at bank default risk, but these are not considered material.

The company has reinsured 100% all ongoing business since 1998 and therefore retains no net insurance risk on business incepted after this date. This gives rise to a reliance on a single reinsurance counterparty. The Board considers that this is an acceptable risk due to the financial benefits provided by the reinsurance arrangements. There were no material changes over the reporting period.

C.3.2 Credit risk concentration

The key concentration exists due to the 100% reinsurance arrangement in place with the Administrator. There is also a further reinsurance arrangement in place with a single reinsurer that relates to some of the pre 1998 liabilities. There are no specific concentrations in respect of premium debtor default.

C.3.3 Credit risk mitigation

The key mitigant is the formal reinsurance arrangement in place with the Administrator who holds a high credit rating.

The Company's risk appetite includes guidance on the institutions to be used for holding cash. Exposures are monitored regularly as part of the financial information and risk appetite review.

The Board also monitors the financial performance of the Administrator and the Group Chief Executive of the Administrator provides an annual update on the financial performance and strength. The Chief Executive Officer of the Company is also employed by the Administrator and provides updates on key developments.

Regular reporting is provided to the AR&CC on the pre 1998 liabilities and the reinsurer's response to the claims notified.

C.3.4 Credit risk sensitivity

The Company considers the risks to the business and stress and scenario testing is carried out on the most material risks identified on a regular basis.

C.4 Liquidity risk

C.4.1 Liquidity risk exposure

Liquidity risk is the risk that the company will not have sufficient financial resources to meet any obligations as they fall due, or will only be able to access these resources at an excessive cost. This is most likely to arise when there is a significant catastrophe event which results in significant claim payments at short notice.

The liquidity of the Company is assessed through analysis of the cash flows expected to be needed as a result of the forecast claims.

There have not been any material changes to this risk over the reporting period.

C.4.2 Liquidity risk concentration

There are not considered to be any material liquidity risk concentrations

C.4.3 Liquidity risk mitigation

The cash flows are analysed by the Administrator on behalf of the Board to assess the bank balances required to be maintained to pay the claims arising. The Company maintains minimum cash balances which are considered to be adequate to pay claims under normal circumstances. Further to this, should it be required, the Company has the option of liquidating investments held to generate cash.

There is a facility in place to allow for cash calls to be made against the Company's reinsurer. These can be made in the event of large payments due on significant individual claims or an accumulation of smaller claims arising from the same event, usually as a result of weather or other natural catastrophe event.

The AR&CC considers the analysis of the cash flows on a quarterly basis and is responsible for determining the minimum acceptable level for the company bank accounts.

The company's investments are all held in OEICs which are deemed to be readily realisable.

C.4.4 Liquidity risk sensitivity

The Company considers the risks to the business and stress and scenario testing carried out on the most material risks identified on a regular basis.

The Board has considered this risk and the existing controls as part of the ongoing risk management process. Although scenario testing has not been carried out on this element, this is regularly reviewed.

C.4.5 Expected profit in future premiums

Expected profits in future premium are calculated using the expected combined operating measure derived from realistic business plans and applied to the future bound premium, including current premium debtors. The result is apportioned to line of business using the profile of premium written.

The total amount of the expected profit included in future premiums is £32k.

C.5 Operational risk

Operational risk is the risk of loss arising from inadequate or failed internal processes, people and systems, or from external events.

C.5.1 Operational risk exposure

The key operational risk that the Company is exposed to is outsourcing risk through the JAA with the Administrator. The Administrator carries out all operational and administrative elements of the business on the Company's behalf. The Company does not have its own staff or systems so is reliant on the Administrator for the provision of all services which are specified in the JAA.

The AR&CC receives a monthly business report and quarterly operational risk dashboard from the Administrator which provide reporting on the key operational business areas and operational risks. An evaluation of the performance of the Administrator against the requirements of the JAA is also undertaken annually. In addition, ad hoc reports on relevant items are provided to the AR&CC where appropriate to enable the Board to assess the level of acceptable risk.

There have not been any material changes to the residual risk exposure over the reporting period. The administrator has continued to administer the business in line with the agreed service standards during the Covid-19 pandemic.

C.5.2 Operational risk concentration

There is a reliance on the Administrator through the outsourcing agreement for all operational and administrative elements of the business resulting in a material risk concentration. The Company does not have its own staff or systems and so is completely reliant on the Administrator for the services specified in the JAA.

This is an accepted risk due to the business model of the Company.

C.5.3 Operational risk mitigation

The Company has a Procurement, Purchasing and Outsourcing Policy as referred to under section B.7 which covers the material outsourcing arrangements.

The JAA is the legal outsourcing contract which details the exact services to be provided. The Board monitors the performance of the Administrator against the JAA on a regular basis. An annual evaluation of the performance of the Administrator against the requirements of the JAA is also undertaken.

The Board has sought additional assurance from the administrator on their ability to maintain operations during the Covid-19 pandemic.

C.5.4 Operational risk sensitivity

The Board has considered this risk and the existing controls as part of the ongoing risk management process. Although scenario testing has not been carried out on this element, this is regularly reviewed.

C.6 Other material risks

C.6.1 Other material risk exposure

The Company regards reputational risk as a key risk. There is the potential for events to occur which could have a negative reputational impact upon the Company. This would generally be due to the operation of one or more of the other risk types, for example, a system failure could result in an inability to service policyholders and claimants and result in reputational damage in the eyes of these customers, or as a result of the actions of any of the persons associated with the Company.

The Board is responsible for the management of reputational risk and considers the potential impacts to the business as part of the ongoing strategic discussions. The assessment of a number of the other risk types considers reputational impacts as a key component in determining the materiality.

There have been no material changes to the risk exposure over the reporting period.

C.6.2 Other material risk concentration

There are no other material risk concentrations to note.

C.6.3 Other material risk mitigation

Reputational risk is mitigated through the effective management of the other key risk types and also through the response to such events if negative reputational impacts occur. Capital is not held against reputational risk.

The Board monitors the ongoing effectiveness of the risk mitigation at their regular meetings and as part of the monitoring of the other risk types.

C.6.4 Other material risk sensitivity

The Company considers the risks to the business and stress and scenario testing is carried out on the most material risks identified on a regular basis. The Board has considered this risk and the existing controls as part of the ongoing risk management process. Although scenario testing has not been carried out on this element, this is regularly reviewed.

C.7 Any other information

The Board has assessed that there is no other material information to note.

D. Valuation for solvency purposes

Following the UK's exit from the EU (European Union), the PRA rulebook continues to refer to the EU SII articles in force at 31 December 2021. Reference to EU directives therefore remain valid.

All material asset and liability classes other than technical provisions have been valued in accordance with Article 75 of Directive 2009/138/EC ('the Directive') and Articles 7 to 16 of the Delegated Regulation (EU) 2015/35 ('the Delegated Act'), taking into account the European Insurance and Occupational Pensions Authority (EIOPA) publication 'EIOPA-BoS-15/113 – Guidelines on recognition and valuation of assets and liabilities other than technical provisions'.

Technical provisions have been valued in accordance with Articles 76 to 86 of the Directive.

As permitted by Article 9 of the Delegated Act, the valuation of assets and liabilities are based, where appropriate, on the valuation method used in the preparation of the annual financial statements. The financial statements have been prepared in accordance with international financial reporting standards (IFRS) and audited by external auditors.

Material assets and liabilities are defined as assets and liabilities that are valued in excess of £85k (Equivalent to 1% of IFRS net assets).

International Accounting Standard (IAS) 39, Financial Instruments: Measurement and Recognition, requires the classification of certain financial assets and liabilities into separate categories for which the accounting requirement is different.

The classification depends on the nature and purpose of the financial assets and liabilities, and is determined at the time of initial recognition. Financial instruments are initially measured at fair value. Their subsequent measurement depends on their classification.

Financial instruments designated as at fair value through profit or loss are subsequently carried at fair value. This category consists of financial investments.

All other financial assets and liabilities are held at amortised cost using the effective interest method, except for short-term receivables and payables where the recognition of interest would be immaterial.

The Directors consider that the carrying value of those financial assets and liabilities not carried at fair value approximates to their fair value.

D.1 Assets

D.1.1 Solvency II valuation of assets

A copy of the Quantitative Reporting Template (QRT) 'S.02.01.02 – Balance sheet' is included in Appendix 1, which is a list of assets and liabilities by type. The table below summarises the SII net valuation of assets and liabilities and the difference compared to the financial statements prepared in accordance with IFRS, with a breakdown of the valuation of assets:

Solvency II Valuation	2021 As reported IFRS Basis £'000	Reclassify to aid comparison	2021 Reclassified IFRS £'000	Net valuation movement	2021 Solvency II Valuation £'000
Total Assets	15,540	(583)	14,957	(2,023)	12,934
Total liabilities	7,015	(583)	6,432	(2,582)	3,850
Net assets	8,525	-	8,525	559	9,084
Breakdown of asset valuation					
Technical provisions - Reinsurance recoverables	5,242	(258)	4,984	(2,020)	2,964
Investments	9,088	-	9,088	-	9,088
Cash and cash equivalents	874	-	874	-	874
Insurance & intermediaries receivables	333	(325)	8	-	8
Reinsurance receivables	-	-	-	-	-
Receivables (trade, not insurance)	3	-	3	(3)	-
Total assets	15,540	(583)	14,957	(2,023)	12,934

The table includes reclassification of certain IFRS assets and liabilities to aid comparability. This has been done as items such as reinsurance payables, which are included within other liabilities in the annual financial statements, are included within the valuation of reinsurance recoverables for SII provided they are not past their due date. Moving this balance from liabilities to assets removes the need to disclose the same difference in both assets and liabilities.

Technical provisions - Reinsurance Recoverables

The valuation of reinsurers' share of technical provisions and the differences in valuation methodology compared with the financial statements are covered in section D.2.

Investments - Participations

Included within investments are subsidiary undertakings that are dormant, having not traded since incorporation and have been valued at cost. The Directors consider that cost approximates to their fair value.

Investments other than participations

The fair value measurement basis used to value financial assets or liabilities held at fair value, which includes investments, is categorised into a fair value hierarchy as follows:

Level 1: fair values measured using quoted prices (unadjusted) in active markets for identical assets or liabilities. This category includes listed equities in active markets, listed debt securities in active markets and exchange traded derivatives.

Level 2: fair values measured using inputs other than quoted prices included within level 1 that are observable for the asset or liability, either directly (i.e. as prices) or indirectly (i.e. derived from prices). This category includes listed debt or equity securities in a market that is not active and derivatives that are not exchange traded.

Level 3: fair values measured using inputs for the asset or liability that are not based on observable market data (unobservable inputs). This category includes unlisted equities, including investments in venture capital, and suspended securities.

All financial instruments recognised by the company and designated at fair value are classified as level 1.

Cash and cash equivalents

This comprises on demand deposits with banks. Cash balances are not subject to a significant risk of change in value and are considered to be held at fair value.

Insurance & intermediaries receivables and reinsurance receivables

Due to the short-term nature of the outstanding balances, their amortised cost is assumed to approximate to their fair value. For SII, this only comprises debtor balances past due. Debtor balances that are not past due are future cash flows that form part of technical provisions as covered in sections D.2 below. As no balances are past due, this balance is nil for SII.

Receivables (Trade, not insurance)

The valuation of non-insurance receivables is nil as SII excludes £3k of prepayments which have no economic value.

D.2 Technical provisions

D.2.1 Solvency II valuation of technical provisions and assumptions used

Under SII the technical provisions are made up of:

- Discounted best estimate claims provisions;
- · Discounted best estimate premium provisions; and
- Risk margin.

The non-life technical provisions (TPs) are calculated as a sum of best estimate and risk margin using a three-stage process of grouping data for homogeneous risks, selecting methodologies and setting assumptions which take into account the economic, underwriting and reserving cycles.

The reserving process captures material factors via engagement and interaction across relevant business areas, particularly the claims and underwriting functions. These factors may not be inherent in the historical data, for example a change introduced to the claims management philosophy may impact the incurred development pattern going forward.

The level of governance applied in setting the TPs is varied depending on the reporting date. The full governance framework is applied as an on-going cycle of activity, particularly driven by external financial reporting dates. Multiple review steps are in place, plus an external audit. This framework is used to sign-off the key reserving assumptions for both the IFRS statutory accounts, and the SII TPs.

The reserving framework is structured such that sufficient oversight exists within the reserve setting process through reviews by key stakeholders within management, by the Actuarial Function Director, and ultimately by the Board via Committee. This ensures there is an independent challenge to the process and results, and that future developments within the business are incorporated into the projections where appropriate.

Modelling methodologies and assumptions

The nature of input assumptions for the reserving models used in projecting ultimate claims costs varies based on the class of business modelled, the levels of historical data available and the nature and complexity of the underlying risk. The final choice of model and assumptions involves professional actuarial judgement and a technical review within the reserving Governance Framework.

The following methods are used accordingly:

- Incurred Development Factor Method (DFM) used either in isolation for 'fire and other property damage' classes or in combination with other methods for liability and latent classes;
- Bornhuetter-Ferguson Method (BF) used primarily for more recent development years for the liability classes;
- Frequency-Severity Approach for liability classes; and
- Simplified methods likes scaling based on exposure measures and Events Not in Data (ENID).

Once the best estimates are calculated, all future years' cash flows are discounted to present value using the prescribed risk-free discount curve for the relevant currency interest rate-term structure. No transitional arrangements or adjustments are applied for the non-life TPs relating to matching or volatility adjustment.

Valuation

Claims provisions, premium provisions and risk margin by class are reported on 'QRT S.17.01.02 – Non-life technical provisions'. The two major contributors to the TPs are the 'general liability' and 'fire and other property damage' classes of business.

Risk margin

The SCR used for calculating the risk margin is a subset of the full standard formula calculated on a 1-year view of risk, reflecting only those risks on already obligated future business as at the balance sheet date.

D.2.2 Level of uncertainty

The estimation of the ultimate liability arising from claims made under non-life insurance contracts is subject to uncertainty as to the total number of claims made on each class of business, the amounts that such claims will be settled for and the timings of any payments. Examples of uncertainty include:

- whether a claims event has occurred or not and how much it will ultimately settle for;
- variability in the speed with which claims are notified and in the time taken to settle them, especially complex cases resolved through the courts;
- changes in the business portfolio affecting factors such as the number of claims and their typical settlement costs, which may differ significantly from past patterns;
- new types of claim, including latent claims, which arise from time to time;
- changes in legislation and court attitudes to compensation, which may apply retrospectively;
- the potential for periodic payment awards, and uncertainty over the discount rate to be applied when assessing lump sum awards;
- the way in which certain reinsurance contracts (principally liability) will be interpreted in relation to unusual/latent claims where aggregation of claimants and exposure over time are issues; and
- whether all such reinsurances will remain in force over the long term.

While the best estimate TPs calculation targets reserving for the average or expected future cost within a range of possible outcomes, due to the uncertainties it is likely that the actual costs will differ from the reserved amount.

Sensitivity analysis

In order to better understand the underlying uncertainty, a range of possible outcomes are tested and analysed. Sensitivity Analysis is a technique used to understand the variability of possible outcomes. This is done by analysing the change in TPs as a result of adjusting a single input parameter.

The table below shows the results of several sensitivity tests, which have been selected to provide coverage of a broad range of risks, which it is foreseeable could materialise within the next 12 months. This is for illustrative purposes and does not represent an exhaustive list of possible events:

SII net best estimate sensitivities to future scenarios				
Risk	Sensitivity applied	£k		
Claims inflation	+ 1.0% each year applied cumulatively	20		
Discount rate shift	+ 0.5% to spot rate at all durations	-8		
	All reinsurer ratings downgraded to B	24		

The largest sensitivity considered historically has been the reinsurance default shock, which is still the case due to the critical part that reinsurance strategy plays in the business model of the Company. Counterparty default risk remains an important component of the Company SCR, therefore the risk margin is also sensitive to this item.

The choice of yield curve shock is based on the assumption that if there are upward or downward rate cycles, the Bank of England will change the interest rates by 25 basis points (bps) at a time, with an assumption of two base rate changes per year translating to an equivalent up or down shift at all durations.

The inflation and discount rate sensitivities are individually broadly symmetric in that an equivalent decrease in the respective inputs will decrease or increase the TPs by a similar order as the above.

D.2.3 Comparison of Solvency II technical provisions with valuation in annual financial statements

The building blocks making up the TPs can be split between those for which the valuation methodology is compatible between SII and current IFRS, and those which by requirements of the SII technical specifications will necessarily be different.

The claims provision calculation (liability on earned business) may follow similar bases, methods and assumptions as IFRS, with the exception that the accounts are currently undiscounted whereas a SII discount rate is prescribed and applied to the total reserves.

Other adjustments relate to different definitions of contract boundaries, the allowance for future earned profits and the consideration of future premium cash inflows in the premium provision for SII.

Net technical provisions	2021 £'000	2020 £'000
IFRS Technical Provisions net of debtors and creditors	900	677
Adjustment for risk margin	(715)	(551)
Adjustment for discounting	(16)	(10)
Other adjustments	10	(46)
SII Net technical provisions	179	70

D.2.4 Use of the matching adjustment

The matching adjustment is not applied to the non-life insurance TPs.

D.2.5 Use of the volatility adjustment

The volatility adjustment is not applied to the non-life insurance TPs.

D.2.6 Use of the transitional risk-free interest rate-term structure

The use of the transitional risk-free interest rate-term structure is not applied to the non-life insurance TPs.

D.2.7 Use of the Directive's Article 308[d] transitional deduction

The use of the transitional deduction is not applied to the non-life insurance TPs.

D.2.8 Recoverables from reinsurance contracts and special purpose vehicles

The recoverables are calculated separately by class of business taking into account the arrangements that are in place for each year of loss. Other than for losses prior to 1998, the reinsurance arrangement is for 100% of the business. The operational management of the portfolio and any retrocession arrangement decisions affecting the profit share are delegated to the Administrator as part of this arrangement.

The relative size of reinsurance recoverables included in the TPs from period to period is closely linked to the relative size of reserves by class, subject to occurrence or otherwise of unusually large losses for the excess of loss accounts.

D.2.9 Material changes in the assumptions made in the calculation of technical provisions compared to the previous reporting period

There have been no significant changes to previously used assumptions, in particular the premium provision assumptions remain aligned to business plans.

D.3 Other liabilities

D.3.1 Solvency II valuation of other liabilities

A copy of the QRT 'S.02.01.02 – Balance sheet' is included in Appendix 1, which is a list of assets and liabilities by type. The table below summarises the SII net valuation of assets and liabilities and the

difference compared with the financial statements prepared in accordance with IFRS, with a breakdown of the valuation of liabilities:

Solvency II Valuation	2021 As reported IFRS Basis £'000	Reclassify to aid comparison	2021 Reclassified IFRS £'000	Net valuation movement	2021 Solvency II Valuation £'000
Total Assets	15,540	(583)	14,957	(2,023)	12,934
Total liabilities	7,015	(583)	6,432	(2,582)	3,850
Net assets	8,525	-	8,525	559	9,084
Breakdown of liability valuation					
Technical provisions - non-life	6,161	(269)	5,892	(2,749)	3,143
Payables (trade, not insurance)	390	-	390	(8)	382
Deferred tax liabilities	-	-	-	175	175
Other liabilities	2	-	2	-	2
Insurance payables	56	(56)			-
Reinsurance payables	258	(258)	-	-	-
Subordinated liabilities	148	-	148	-	148
Total liabilities	7,015	(583)	6,432	(2,582)	3,850

The table includes reclassification of certain IFRS assets and liabilities to aid comparability, as explained in section D.1.

Technical provisions - non-life

The valuation of technical provisions and the differences in valuation methodology compared with the financial statements is covered in section D.2.

Payables (trade, not insurance)

Trade payables consists of tax payable, amounts due to suppliers, and accrued costs. The balances are all due within one year and are valued at their carrying value of amortised cost.

Included within 'Payables (trade, not insurance)' are unpresented cheques and unclaimed capital and dividends which are removed in the SII valuation as they have no economic value.

Deferred tax liabilities

The calculation of deferred tax for use in the financial statements is based on temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for tax purposes.

Deferred tax is measured using tax rates expected to apply when the related deferred tax asset is realised or the deferred tax liability is settled based on tax rates and laws which have been enacted or substantively enacted at the year-end date. For the current reporting period the value of deferred tax liability was nil.

For SII the deferred tax liability has been calculated to take into account the valuation differences between the financial statements and the SII valuation of assets and liabilities. The tax rate used is 25%.

Any other Liabilities

Intercompany balances with the Company's dormant subsidiaries are shown as any other liabilities. In light of their immateriality, their amortised cost is assumed to approximate to their fair value.

Reinsurance payables

Only amounts past their due date are included in reinsurance payables under SII as amounts not past their due date form part of TPs which is covered in Section D.2.

Subordinated Liabilities

This comprises share capital issued by the Company. The Company's 'preference' and 'ordinary' preference shares are entitled to annual dividends of 4% and 5% respectively on the amount paid up. The Company has an obligation at the year-end date in relation to the dividends payable on the shares and, because of this, the Company is required to account for the whole of its called up share capital as 'permanent interest-bearing capital' in the statement of financial position under IAS 32, Financial Instruments: Presentation. Both classes of issued shares are fully paid up.

Under SII the called up value of these shares are valued as part of liabilities, but can be recognised as capital in the Company's Own Funds, which is covered in section E.2.

D.4 Alternative methods for valuation

No alternative valuation methods have been used in the valuation of SII assets or liabilities.

D.5 Any other information

There is no other information that requires disclosure regarding the valuation of assets and liabilities.

E. Capital Management

Under SII capital that the Company can use to meet its regulatory SCR and MCR is called Own Funds. Off-balance sheet items that can be called upon to absorb losses are called Ancillary Own Funds. The Company does not hold any such items.

The excess of assets (section D.1.1) over liabilities (section D.3.1) plus qualifying subordinated debt less any foreseeable distributions constitutes basic own funds:

Basic Own Funds	2021 £'000	2020 £'000
SII Valuation of assets	12,934	11,803
SII Valuation of liabilities	(3,851)	(3,313)
Excess of assets over liabilities	9,083	8,490
Qualifying subordinated debt Foreseeable distributions	148 -	148
Basic own funds	9,231	8,638

Basic own funds are classified into tiers. Restrictions on how much of each tier can be used to cover the SCR and MCR are covered in sections E.1.3 and E.1.4 respectively.

The Company's 'preference' and 'ordinary' preference shares are classified as qualifying subordinated debt as both classes of preference capital are subordinate to all other debts and are irredeemable.

E.1 Own funds

E.1.1 Own funds - objectives, policies and processes

The Company is committed to delivering the highest standards of financial and investment management, and all aspects of solvency.

The capital management policy covers all aspects of capital management, the definition and monitoring of capital available establishing the core principles around the distribution and capital raising, along with the associated allocation and use.

This Policy forms part of The Company's policy framework, which is a mechanism for statements of intent adopted by the Board, subject to local market, business practices and regulatory conditions.

The overall responsibility for reviewing and approving the capital management policy lies with The Board. The responsibility for the policy implementation resides with The Board through the AR&CC who are involved in managing capital and solvency.

The Board, supported through the JAA on a day to day operational level will ensure that:

Regulatory and legislative

• current and future rules are monitored and understood, particularly regarding the definition of capital and various capital requirements.

Definition and monitoring of capital available

- capital is maintained at a sufficient quality in order to meet current and future projected
 requirements over the business plan period, ensure the Company has a defined risk appetite
 regarding the quality and tiering of capital required to meet its own internal appetite for solvency.
- sufficient capital is held in order to satisfy capital requirements, regulatory or otherwise.
- the level of capital available in the Company is monitored on a regular basis in accordance with an agreed process.
- there is regular monitoring and review of the quality and tiering of capital, in order to assess whether the targets are met (on an ongoing basis).

Definition and monitoring of capital requirements (Solvency)

- all current and future capital requirements (regulatory or otherwise) are understood at all times.
 The Company has an agreed definition of an 'Economic Capital Requirement', reflecting its own view of risk.
- the Company has an agreed risk appetite to ensure a satisfactory level of capital coverage on all relevant bases including a statement of coverage for its economic and regulatory capital.
- the Company has at least enough capital to meet its regulatory requirements at all times.
- all capital requirements covered by the risk appetite are calculated and the relevant solvency position reviewed on a regular basis in accordance with an agreed process.
- relevant stakeholders (i.e. regulators) are informed of any adverse changes to solvency positions in excess of agreed reporting levels.
- future capital requirements and projected solvency positions throughout the period of the business plan are assessed as part of the ORSA process.

Principles around the distribution and raising of capital

- there is a clearly defined process for assessing level of dividends and grants prior to any payment being made.
- there is a clearly defined process for monitoring market conditions and future capital needs in order to assess the requirement and benefit of capital raising or redemptions.
- appropriateness for raising or redeeming capital is assessed against all other principles outlined in this policy (e.g. solvency coverage, capital quality).

Principles around the allocation and use of capital

- there is an agreed approach to setting and monitoring the return on capital.
- there is a clear process for determining when a strategic decision should take into account a
 capital perspective; this must cover all decisions that materially change the use of capital or
 solvency position.
- all decision-making considers the impact on solvency, capital allocation, return on capital and any other principles included in this policy.

The Board will continue to monitor and maintain the integrity of the Capital Management Policy, standards and guidance to ensure they reflect the culture of the business, and the regulatory environment in which it operates.

Reports detailing performance against this policy or any business critical changes will be reviewed periodically, but at least annually, by the AR&CC. Any breaches to this Policy or any incidents must be escalated immediately to the Chairman and Chairman of the AR&CC.

This Policy is reviewed every three to four years taking into account any changes to legislation, or more frequently should a significant change in the business, market or regulatory environment occur. The policy was last reviewed in August 2018.

Business planning is conducted annually over a three year horizon.

E.1.2 Movement in own funds compared to prior period

A copy of the QRT 'S.23.01.01 – Own Funds' is included in Appendix 6. The table below is a summary of own funds, by tier, with comparison to the prior year:

Analysis of Own Funds	Total	Tie Unrestricted	er 1 Restricted	Tier 2	Tier 3
2021	£'000	£'000	£'000	£'000	£'000
Preference share capital	148	-	148	-	-
Reconciliation reserve	9,083	9,083	-	-	-
	9,231	9,083	148		-
2020					
Preference share capital	148	-	148	-	-
Reconciliation reserve	8,490	8,490	-	-	-
	8,638	8,490	148	-	-
Movement in own funds					
Preference share capital	-	-	-	-	-
Reconciliation reserve	593	593	-	-	-
	593	593			

As permitted under Article 308b of the SII Directive they have been classified as tier 1 capital on a transitional basis. The transitional arrangement expires in 2026, after which the preference shares will no longer be recognised as SII own funds. As they are not material to the solvency cover of the Company there is currently no intention to redeem or replace these instruments. No ancillary own funds have been recognised.

The reconciliation reserve is primarily retained earnings from the financial statements adjusted for differences in valuation between the financial statements and SII, as covered in section D. An analysis of the reconciliation reserve is included in Appendix 6.

The table below summarises the key movements in the reconciliation reserve between the current and prior year:

Movement in reconciliation reserve	£'000
Prior year balance	8,490
IFRS Retained earnings for year	529
Movement in SII revaluations:	
Net technical provisions	123
Other	(59)
Total movement for year	593
Current year balance	9,083

Two key components of the IFRS retained earnings for the year are underwriting performance, covered in section A.2, and investment performance, covered in section A.3. Other items, such as tax and grant payments are covered in section A.4.

E.1.3 Eligible amount of own funds available to cover the Solvency Capital Requirement

Analysis of eligible own funds available to cover the SCR	2021 £'000	2020 £'000
Tier 1 Restricted tier 1	9,083 148	8,490 148
Eligible tier 1 own funds	9,231	8,638
Eligible tier 2 own funds	-	-
Eligible tier 3 own funds	-	-
Total eligible own funds	9,231	8,638
Ineligible own funds	-	-
Total own funds	9,231	8,638

Restricted tier 1 own funds cannot form more than 20% of total tier 1 own funds. Tier 2 own funds cannot amount to more than 50% of the SCR and Tier 3 own funds cannot amount to more than 15% of the SCR.

E.1.4 Eligible amount of own funds available to cover the Minimum Capital Requirement

Analysis of eligible own funds available to cover the MCR	2021 £'000	2020 £'000
Tier 1 Restricted tier 1	9,083 148	8,490 148
Eligible tier 1 own funds	9,231	8,638
Eligible tier 2 own funds	-	-
Total eligible own funds	9,231	8,638
Ineligible own funds	-	-
Total own funds	9,231	8,638

Restricted tier 1 own funds cannot form more than 20% of total tier 1 own funds. Tier 2 capital cannot amount to more than 20% of the MCR and Tier 3 capital cannot be used to cover the MCR.

E.1.5 Comparison between solvency II own funds and equity reported in the financial statements

Reconciliation from IFRS net assets to Solvency II own funds	2021 £'000	2020 £'000
Equity as reported in IFRS Financial Statements	8,525	7,996
Recognise subordinated debt (preference share capital) as equity	148	148
Revalue technical provisions: Gross technical provisions	(2,020)	(1,707)
Reinsurers' share	2,748	2,312
Adjust for assets and liabilities with no SII fair value	5	5
Impact of revaluation on deferred tax	(175)	(116)
Solvency II Valuation of own funds	9,231	8,638

Both classes of preference capital of the Company, which are included within liabilities in the IFRS financial statements, can be recognised as restricted tier 1 capital for solvency purposes in accordance with transitional arrangements.

Technical provisions are revalued on a SII basis as described in section D.2.

Some assets and liabilities such as prepayments are removed from the SII valuation as they are inadmissible or deemed to have no measurable fair value.

The difference between the Solvency II value of net assets and the value used for the calculation of tax gives rise to an adjustment to the deferred tax provision, as covered in section D.3.

E.1.6 Transitional arrangements

1,286 4% cumulative preference shares of £5 each, with a SII value of £6k, and 28,284 5% cumulative ordinary shares of £5 each, with a SII value of £141k, are recognised as restricted tier 1 under transitional arrangements.

E.1.7 Ancillary own funds

Approval has not been sought for any form of ancillary own funds.

There is no unpaid share capital in issue and no material letters of credit, guarantees or any other legally binding commitments have been identified or recognised.

E.1.8 Items deducted from own funds and restrictions affecting the availability and transferability of own funds

No items have been deducted from basic own funds, and there is no significant restriction affecting the availability and transferability of own funds.

E.2 Solvency Capital Requirement [SCR] & Minimum Capital Requirement [MCR]

E.2.1 SCR and MCR

The SCR is the amount of capital that the Company is required to hold as required by the SII Directive. The Company uses the Standard Formula SCR calculation which is defined in the SII Delegated Act. This is formula based and consists of modules for each risk type, and adjustments for diversification and the loss absorbing capacity of deferred tax. A breakdown of the SCR elements applicable to the Company is given in the following section.

The MCR is the higher of the absolute floor (£3,126k) and the combined MCR.

The combined MCR is based on the linear MCR, subject to a cap (45% of the SCR) and floor (25% of the SCR). The Linear MCR is a simplistic calculation based on factors applied to net written premiums and net best estimate of TPs, analysed by class of business.

A copy of the QRTs 'S.25.01 – Solvency Capital Requirement' and 'S.28.01 – Minimum Capital Requirement' are reproduced in appendices 7 and 8 respectively.

As at 31 December 2021 the SCR for the Company was £3,108k, and the MCR was £3,126k. Both amounts are still subject to supervisory assessment.

E.2.2 SCR by risk module and Changes to the SCR and MCR compared to the prior period

The following table gives a breakdown of the standard formula SCR of the Company and summarises the movement in the SCR and MCR between the current and prior year:

Capital Requirements	2021	2020	Change
	£'000	£'000	£'000
Market risk	3,107	2,370	737
Counterparty default risk	531	537	(6)
Non-life underwriting risk	64	61	3
Diversification	(401)	(389)	(12)
Basic SCR	3,301	2,579	722
Operational risk	110	109	1
Loss absorbing capacity of deferred tax	(303)	(229)	(74)
SCR	3,108	2,459	649
MCR	3,126	3,338	(212)

Market risk has grown following a rise in equity exposure resulting from an increased investment trust holding, whose portfolio is heavily weighted towards listed equities, a large portion of which are overseas. This has increased both equity and currency risk exposure.

All other risk modules have remained stable.

The loss absorbing capacity of deferred tax has increased helped by the potential to carry back losses to the prior year and the increase in deferred tax rate from 19% to 25%.

The MCR is equivalent to the absolute floor for both the current and prior year. As the absolute floor is quoted in Euros and not the reporting currency of sterling, changes in exchange rate, and not movement in the absolute floor, is the driver of the change compared to the prior year.

E.2.3 Use of simplified calculations and undertaking-specific parameters and use of the option provided for in the third subparagraph of Article 51(2) of Directive 2009/138/EC

No simplifications or undertaking-specific parameters have been used in calculating the standard formula SCR. As no capital add-on has been applied, and no undertaking-specific parameters have been utilised, no illustration of their impact is necessary and use of the option provided for in the third subparagraph of Article 51(2) of the Directive has not been made.

E.2.4 Inputs used in the calculation of the MCR

A copy of the QRT 'S.28.01.01 - Minimum Capital Requirement' showing the inputs used for the calculation of the MCR is included in Appendix 8.

E.3 Use of the duration-based equity risk sub-module in the calculation of the SCR

The duration-based equity risk sub-module has not been used.

E.4 Differences between the standard formula and the internal model

An internal model has not been used in calculating the Company's SCR.

E.5 Non-compliance with the MCR and non-compliance with the SCR

E.5.1 MCR non-compliance

There has been no breach of the MCR during the reporting period.

E.5.2 SCR non-compliance

There has been no breach of the SCR during the reporting period.

E.6 Any other information

No further information regarding the capital management of the company is required.
